31 Manager quality audit	32 Document control

Version: 1.2 Effective date: September 15, 2026 Applies to: Saturn Star Moving, Dexa Moving, sales representatives, managers, operations leads, and customer-care staff Document owner: Mission Control operations

1. Purpose

This playbook explains how to use Mission Control from the first customer inquiry through quoting, booking, move preparation, execution, payment, customer care, and relationship follow-up.

It is not a script that should make conversations robotic. It is a decision system. A good rep should sound natural while ensuring that the CRM contains enough evidence for sales, pricing, and operations to make a reliable decision.

The goal is simple:

Make the customer feel understood, reduce uncertainty, recommend the right moving plan, record the commercial promise accurately, and leave every conversation with a clear next step.

Saturn Star Sales Experience Standard

Our job is to make the customer's transition feel more organized than it did before they contacted us.

Every interaction should leave the customer feeling heard, clearer, more prepared, less responsible for coordinating everything alone, and confident about what happens next.

We do this by:

1. asking one useful question at a time;
2. explaining why information is needed;
3. making a recommendation instead of presenting a confusing menu;
4. separating what is confirmed from what remains uncertain;
5. never making the customer repeat information Saturn Star already has;
6. owning the next action and its deadline;
7. correcting mistakes without defensiveness;
8. ensuring the experience remains recognizably Saturn Star from first inquiry through final care.

Technology and checklists should create intelligence behind the scenes. The customer should experience a calm conversation—not Saturn Star's database structure.

The emotional journey

Stage	The customer may feel	Saturn Star must make them feel
First inquiry	Overwhelmed or suspicious	Heard
Discovery	Unsure where to begin	Oriented
Inventory review	Worried something will be missed	Understood
Recommendation	Confused by options	Guided
Estimate	Afraid of hidden charges	Clear and protected
Decision	Nervous about committing	Unpressured but supported
Booking	Worried they chose incorrectly	Confident
Handoff	Afraid of repeating everything	Remembered
Move preparation	Anxious about readiness	Prepared
Problem or mistake	Angry or abandoned	Taken seriously
Completion	Exhausted	Relieved and cared for

Six signature Saturn Star moments

1. The Saturn Star playback

Before recommending or pricing, say:

“Let me play this back so I make sure we have organized it correctly.”

Restate the date or timing window, route, major inventory, priorities, uncertain pieces, and evidence still required. Let the customer correct the plan.

2. The visual transition map

Organize the move as **Prepare → Move out → Hold → Move in → Settle**. Mark each phase **confirmed**, **optional**, **pending**, or **not required**. Use the same map in the consultation, estimate, customer communications, handoff, and job plan.

3. The intelligent inventory start

Use public listing information, photos, video, or prior customer details to reduce the work the customer must do. Explain the source, benefit, limitation, and customer control.

4. The recommendation

Say:

“Based on everything you told me, here is the plan I recommend and why.”

Do not make the customer assemble a service plan from an undifferentiated menu. Present alternatives only when they meaningfully change cost, responsibility, timing, or risk.

5. The clean commitment

End every meaningful interaction with:

"Your next step is [X]. Our next step is [Y]. You will hear from us by [Z]."

Record the owner and deadline in Mission Control.

6. The warm handoff

After booking, introduce the operations owner by name:

"I have transferred everything we discussed to [Name], who will coordinate the operational side. You will not need to repeat the move. The one item still pending is [item], and we will confirm it by [date]."

The operations owner must acknowledge the customer's primary concern and confirm the preparation timeline.

Default service tempo

These are normal company standards, not promises to fabricate an answer before the work is ready. If a deadline cannot be met, contact the customer before it passes, explain the new owner and time, and record the exception.

Moment	Default standard
Fresh inquiry during staffed hours	Human acknowledgement within 10 minutes
Missed call during staffed hours	Return attempt within 15 minutes
Inquiry outside staffed hours	Acknowledge automatically; human response by 10:00 a.m. next staffed day
Simple, verified estimate	Send or give a specific readiness update the same staffed day
Complex estimate	Confirm owner and delivery time before ending the consultation; target within one staffed day after evidence is complete
Customer-submitted inventory or media	Acknowledge receipt promptly; review or state review time within four staffed hours
Viewed estimate	Contextual human follow-up within one staffed day unless another milestone was agreed
Booked-customer handoff	Named introduction the same staffed day as booking
Material escalation or complaint	Human acknowledgement within 30 minutes during staffed hours; named owner and next update time
Move-day delay or material change	Notify as soon as known; never let the promised arrival window pass silently
Post-move care check	Same day or by noon the next staffed day

2. The five operating rules

2.1 Treat the customer's transition as the job

The core move may be only one part of the customer's real need. The complete transition can include:

- packing or partial packing;
- materials delivery;
- move-out cleaning;
- junk removal;
- pickup from more than one address;
- temporary storage;
- a later delivery from storage;
- labour-only loading or unloading;
- specialty handling;
- move-in cleaning;
- unpacking;
- payment and final care.

Do not force a three-stage customer journey into a single move-day line item. Build the phases that are known, state the assumptions that are not known, and update the plan as new information arrives.

2.2 Evidence before certainty

Inventory and operational facts may come from:

- customer-provided details;
- the stored listing and MLS scan in Mission Control;
- customer photo uploads;
- a live recorded video survey;
- a representative's in-home consultation;
- Google address and route intelligence;
- manual measurements or confirmed access notes.

Always distinguish what the customer confirmed from what the system inferred. Do not describe customer inventory as MLS inventory unless it came from the stored listing scan. Do not send a binding-style price when inventory, route, destination, or access remains materially incomplete.

2.3 One question at a time

Do not send a customer a paragraph containing ten questions. Ask the next question that unlocks the next decision.

A natural order is:

1. acknowledge the customer and their situation;
2. confirm the move date or explain that a flexible date is acceptable;
3. confirm origin and destination;
4. establish how inventory will be verified;
5. identify the next operational uncertainty;
6. recommend the plan;
7. agree on the next step.

2.4 The quote is the commercial promise

The accepted quote controls:

- services included;
- move legs and stops;
- price and billing model;
- crew and truck plan;
- deposit terms;
- customer-facing assumptions and clauses.

Operations must not silently change what sales sold. Sales must not promise something that operations cannot execute.

2.5 Every meaningful conversation ends with a next step

The next step may be:

- the customer confirming an inventory list;
- a photo request;
- a video survey;
- an in-home consultation;
- a quote review;
- a tentative reservation;
- a scheduled follow-up;
- a deposit and confirmed booking;
- a manager review;
- a clear lost or nurture disposition.

"I'll get back to you" is not a complete next step unless the CRM also records when, why, and what will happen next.

3. What each CRM record means

Lead

The lead is the complete working customer file. It contains identity, communication, route, dates, inventory evidence, notes, sales stage, assignment, follow-up, automation state, tentative reservation state, operations data, and lifecycle outcomes.

Quote

The quote is a versioned commercial proposal. It contains services, line items, move legs, estimated hours, truck count, crew size, price, payment terms, deposit, acceptance status, and revision history.

Inventory

Inventory is the working list of items expected to move. Every item should have a quantity, inclusion decision, room, and useful volume or weight estimate. Unknown dimensions must remain visible as unknown; they must not silently become zero.

Media

Media includes listing evidence, customer photo uploads, representative uploads, receipts, and video-survey assets. Media is evidence, not automatically confirmed scope.

Follow-up

A follow-up is a dated obligation with a reason. It is not merely a note. If the customer expects an answer or decision on a date, create a real follow-up.

Tentative reservation

A tentative reservation is a courtesy hold while a customer decides or waits for missing information. It is not a confirmed booking and does not replace a deposit.

It should contain:

- the date being considered, if known;
- why the customer is tentative;
- the decision or check-in date;
- an expiry;
- the next follow-up;
- customer notification status.

Booked job

A booked job is a lead with a confirmed commercial commitment. It becomes operational work requiring customer, financial, crew, equipment, and readiness checks.

Job outcome

The outcome contains actual hours, crew, issues, payments, customer care, review, referral, and profitability evidence. Outcomes teach the system where estimates were accurate or wrong.

4. Role responsibilities

Sales representative

Own the relationship until the job is cleanly booked or dispositioned. Capture context, verify scope, use the correct estimate path, send communications, create tentative reservations, and schedule follow-ups.

Manager

Handle exceptions involving pricing approval, unusual scope, high-value jobs, uncertain margin, complaints, damage risk, branch conflicts, or commitments outside normal policy.

Operations lead

Prepare and execute accepted work. Assign crew, reserve the quoted truck plan, verify access, confirm equipment and job packets, record live issues, and capture actuals.

Crew

Use the assigned job packet and dispatch information. Report scope differences or move-day changes rather than privately agreeing to unrecorded work.

Every assigned crew—including a qualified subcontractor—delivers the Saturn Star experience:

- introduce the team as Saturn Star and use the customer's name;
- arrive in approved uniform and presentation with no visible competitor branding;
- do not distribute personal business cards, solicit private work, or discuss internal subcontractor arrangements;
- do not blame "the office" or renegotiate price onsite;
- return every material scope or price change to Mission Control;
- begin with a customer walkthrough and end with a placement/completion check;
- communicate delays, damage, or concerns immediately through the named operational owner.

Saturn Star owns the promise regardless of who performs the physical work.

Owner

Controls company-wide access, financial exceptions, branch configuration, pricing policy, payment accounts, and final escalations.

The lifecycle below turns the Saturn Star experience standard into controlled work from first inquiry through final care.

Stage 1 – Inquiry and ownership

What the rep does

1. Open Inbox for fresh inbound calls, SMS, email, and website inquiries.
2. Confirm whether Mission Control matched the activity to an existing lead.
3. Check for duplicates before creating another lead.
4. Assign an accountable owner.
5. Confirm the branch using the actual service geography.
6. Read the customer's latest message before replying.

Minimum identity

Capture:

- name;
- phone;
- email when available;
- preferred communication channel.

Explain why naturally: "I'll send the plan and estimate there so you have everything in one place."

Do not

- create a second lead because the customer called from a differently formatted version of the same phone number;
- assume the first address suggestion is Canadian;
- begin with a price before understanding what the customer needs;
- let automation continue if the customer asks for a person or expresses confusion.

Stage 2 – Context gathering

Start with the customer's real situation:

- Are they selling, buying, renting, downsizing, moving for work, or handling a family transition?
- Is the date firm, flexible, or unknown?
- Do the closing and possession dates align?
- Is the destination known?
- Are they comparing moving methods such as a container, rental truck, or full-service mover?
- What outcome matters most: certainty, timing, care, simplicity, or price?

Record customer priorities and move reasons only when relevant to service. Do not infer sensitive personal traits or use them to manipulate pricing.

Recommended conversational flow

1. "I can help you map this out."
2. "What part is already firm—the move-out date, the new home, or neither yet?"
3. Reflect their answer.
4. Ask the next question required by that answer.

Stage 3 – Address and route verification

Address rules

- Prefer complete Canadian address suggestions.
- Read the full city, province, and postal code before selecting.
- Never assume a street in Ohio is the Ontario address with the same name.
- Confirm unit number for apartments and condos.
- Capture each actual stop separately.

Route evidence

The system may estimate route distance, operating travel, branch, and access context. The rep must still confirm:

- origin and destination are the intended locations;
- additional pickups or drop-offs;
- storage legs;
- loading docks, elevators, long carries, or restricted time windows when applicable.

Do not repeatedly ask parking questions for a simple house when address intelligence already indicates ordinary access. Confirm high-impact or uncertain conditions instead.

Stage 4 – Choose the inventory evidence path

Use the strongest available evidence with the least customer friction.

Path A: stored listing/MLS scan

Use when Mission Control has a matched stored listing.

1. Allow the scan to complete.
2. Review rooms, duplicate risks, and uncertain objects.
3. Do not claim that the customer supplied the scan.

4. Present the inventory as a helpful starting point.
5. Ask the customer to confirm what is moving, staying, sold, or missing.

Suggested language:

"To save you from listing every room from scratch, I pulled together a starting inventory from the property's public listing. I'll send it room by room so you can quickly remove anything staying behind and add anything the photos did not show."

Path B: customer photo request

Use when no usable listing exists, rooms are missing, or hidden areas matter.

Ask for:

- main rooms;
- garage;
- basement;
- closets;
- patio or shed;
- storage locker;
- packed boxes;
- specialty items.

The CRM count must match the uploaded assets. If the upload says four and the CRM says three, stop and reconcile media before scanning.

Path C: video survey

Use for complex homes, unclear inventory, garages, wardrobes, storage, commercial work, or when photos cannot show enough context.

Workflow:

1. Open the lead's video survey. Reuse the lead's existing customer link when one is already available.
2. Review the customer message.
3. Send by SMS or email.
4. Customer accepts recording and AI-analysis consent.
5. Watch for the **Customer waiting** notice and join the room.
6. Confirm both people are present before beginning the walkthrough.
7. Start face-to-face when practical, then ask the customer to select **Show room • wide view**. The system prefers an exposed Ultra Wide/0.5× rear lens and falls back to the available back camera.
8. Recording begins through the session lifecycle when the customer joins.
9. Guide the customer room by room.
10. Mark rooms, staying-behind items, decision-pending items, oversized pieces, access, or notes.

- I1.** End the call normally.
- I2.** Follow the visible recording, video-preparation, AI-analysis, inventory-draft, and human-review stages.
- I3.** Watch the recording or use timestamps when evidence needs clarification.
- I4.** Review duplicates and spoken dispositions.
- I5.** A person confirms the final inventory before pricing.

The AI must listen for statements such as:

- "I'm selling that";
- "this stays";
- "only the large pieces";
- "that goes to my sister's house";
- "this is junk."

Visual detection and customer speech that conflict must be marked for review.

Path D: in-home consultation

Use when physical access, specialty handling, commercial scope, luxury pieces, or uncertainty justifies an onsite review.

Path E: customer verbal inventory

Use for genuinely small or simple work. Convert each item to known dimensions when available. New items should enter the item catalog only after reasonable review, not because an AI guessed once.

Items that might be sold, donated, or left behind

Customers often know an item exists but do not yet know whether it will move. Do not force that item into "moving" or "staying." Mark it as **decision pending**, record what the customer is trying to do with it, and set the date when the decision should be checked again.

Build the estimate using the least surprising safe treatment:

- include the item in truck, crew, time, and capacity planning when removing it later would reduce the price or leave the price unchanged;
- show a removable allowance when the item creates a meaningful, separable cost;
- keep it outside the committed scope only when the customer understands the possible price, capacity, or scheduling change if it is later added.

Say:

"No problem—we'll keep it visible in the plan for now. If you sell or donate it, let us know and we'll update the inventory and explain whether that changes the price."

Never promise a lower price merely because one item may disappear. Recalculate the complete plan first; under a package or capacity band, the price may reasonably remain unchanged.

Complex furniture, truck reconciliation, and post-move learning

Added September 15, 2026 following the [Ryan Burton move audit](#). Sales preserves the confirmed scope; operations owns the truck, assembly, access and time plan, and records its approval before dispatch.

A complete item list is the start of the work plan. A move consisting mainly of large furniture can need substantial truck space, protection, carrying, disassembly, and reassembly even when the customer handles all boxes and light items.

Before committing a price and schedule:

- 1. Preserve important item details.** Record pullout/trundle/storage mechanisms, materials, model, approximate dimensions, component count, and whether mattresses or attachments are included. When merging duplicate items, retain these details on the surviving item. Do not delete a mechanism because it belongs to a larger assembly.
- 2. Verify complex pieces visually.** For a heavy or mechanism-equipped daybed, sleeper, sectional, large BBQ, or similarly awkward item, obtain suitable photos/video, a model reference, or an operations inspection. Expand vague entries such as "patio furniture" into a confirmed set of pieces. Mark estimated dimensions and weights as estimated.
- 3. Plan assembly at each end.** Operations records disassembly and reassembly separately, required workers, tools, instructions, hardware storage, and a duration range with its evidence. Identify tasks that prevent those workers from loading or unloading at the same time. Use item-specific evidence; a generic combined allowance is insufficient for complex furniture. Customer-handled assembly requires explicit scope confirmation.
- 4. Confirm each carrying route.** Record origin and destination floor, stairs/elevator or walkout, doors/turns, parking and carry distance for significant items. Unknown access is unresolved, not confirmed zero. A basement room prompts a route check; it does not automatically prove stairs.
- 5. Reconcile the truck plan.** Operations signs off on one truck size/count and trip plan after reviewing volume, payload, geometry, stackability, protection space, and measurement confidence. Resolve disagreement between CRM recommendations, quote messages, lead fields, and rental booking before dispatch. If uncertainty could change the truck class, verify the load or document a conservative operational choice. A nearby destination does not by itself authorize unbudgeted repeat trips.
- 6. Separate price from resources.** Discounts and relationship overrides do not reduce required crew, hours, or truck size. Review profitability after all discounts using the agreed operational plan and uncertainty allowance. Preserve who approved the exception and its scope. Resolve conflicting price edits before resending a quote.

Before dispatch, the operations lead checks one current packet against the accepted terms and subsequent agreed changes: date/time, truck size/count, crew, billing model, actual recorded deposit, included/excluded inventory, item-specific assembly tasks, tools, access, and duration range. Regenerate and acknowledge the

packet after changes. Do not dispatch from stale notes or a “no truck needed” reservation status on a truck move. Missing preparation checkmarks require verification; do not treat them as evidence of completed preparation.

Within one working day after a truck swap, material time overrun, or unexpected handling difficulty, operations records:

- planned versus actual crew and truck, start/end times and breaks;
- truck exchange or repeat-trip time and affected workers;
- complex-item disassembly and reassembly time, workers, model/components and access;
- actual inventory changes with customer evidence, distinguished from known items that were underestimated;
- direct job costs and final approved revenue, with any fee discrepancy reconciled;
- the cause, corrective owner, and specific estimate/catalog/dispatch rule needing review.

Record both elapsed crew-clock time and labor person-hours, accounting for simultaneous work. A positive customer review does not close the operational audit. Keep learning records separate from customer billing changes; an estimating error within confirmed scope is not itself evidence of an authorized scope increase. Calibrate handling ranges from comparable observed jobs, and label interim assumptions until validated.

Stage 4A – Use the Estimate Readiness Workspace

The Estimate Readiness Workspace is the controlled drafting point between collecting information and making a fixed-price promise. It is part of the estimate draft—not a separate dashboard.

Do not treat any single evidence source as complete by itself. MLS may miss garages, storage, boxes, renovations, recently purchased furniture, and items the customer plans to sell. Photos may miss closets or access conditions. Video and AI may misidentify, duplicate, or overlook items. Phone and SMS lists depend on what the customer remembers.

Choose one primary evidence path at a time to keep the experience simple. Add corroborating evidence where the readiness gates reveal a material gap. Use the available sources together when needed:

- MLS or stored listing scan;
- customer photos;
- live video walkthrough and recording;
- SMS or written list;
- representative or phone inventory;
- customer verification decisions;
- in-home consultation when required.

The workspace has four gates.

Gate 1: Evidence collected

Confirm that at least one defensible inventory source is on file. Then ask whether the source covers the complete move, including:

- garage, basement, attic, shed, patio, storage locker, and closets;
- packed and unpacked boxes;
- recently added items;
- furniture being sold, donated, discarded, or left behind;
- specialty items and mounted items.

For fixed-price work, the customer must confirm the proposed scope. Labour-only work may use the simpler confirmation appropriate to the service.

Gate 2: Inventory reconciled

Every material item should be classified as:

- **moving / confirmed;**
- **staying / excluded;**
- **decision pending;**
- **missing or needs clarification.**

Resolve contradictory evidence. Do not silently let MLS override the customer, let AI override a person, or let a later source erase earlier evidence. Preserve the sources and use the newest confirmed decision.

Included items must have usable volume or dimensions. Unknown cubic feet and unresolved included-item decisions block a final fixed-price estimate.

Gate 3: Route and access

Confirm separately for origin and destination:

- complete address and route;
- unit, floor, and property type;
- stairs and elevator;
- elevator reservation or booking window;
- loading area, parking, and long carry;
- narrow doors, hallways, turns, or restricted access;
- extra pickups, drop-offs, storage, and other move legs;
- packing status and estimated boxes.

The existence of an address does not prove that access is understood.

Gate 4: Commercial promise

Before sending, confirm:

- crew and truck recommendation reflects the reconciled inventory;
- route, access, specialty work, packing, and move legs are priced;
- estimated internal hours and direct costs support the fixed price;
- margin is reviewed and any required approval is complete;
- deposit and payment account are correct;
- the customer explanation states what is included and what remains conditional.

The customer does not need to see internal hourly costing for fixed-price work. The team uses it to test whether the price is operationally safe and fair.

What blocks sending

A final fixed-price estimate is not ready when:

- there is no evidence source;
- the customer has not confirmed the proposed scope;
- an included item remains decision-pending or needs confirmation;
- an included item has unknown cubic feet;
- route or required identity data is missing;
- crew, truck, price, or deposit is missing;
- a critical margin exception is unresolved.

Non-critical warnings—such as an unchecked hidden area, packing status, box count, or an access detail—must still be confirmed or deliberately addressed before sending. Do not click past warnings without understanding their effect.

Stage 5 – Build the customer move plan

The estimator uses five working sections:

- 1.** Route
- 2.** Services
- 3.** Inventory
- 4.** Crew and access
- 5.** Price and send

Core move default

The ordinary full-service move may include:

- loading;
- transport;

- unloading;
- protective wrapping;
- ordinary disassembly and reassembly as scoped;
- placement at destination.

Never assume an add-on is included merely because it was discussed.

Consultative phases

Build the phases that apply:

- Prepare
- Move out
- Hold
- Move in
- Settle

Each phase should be marked included, optional, or pending.

Assumptions

If the destination or storage duration is unknown, state a revisable assumption:

"Storage is modeled for two months. Monthly charges adjust to actual duration. The final delivery date and route will be confirmed when the new home is known."

Do not fabricate a precise future-delivery price when the route is unknown. Quote what can be known, show an allowance or provisional range where appropriate, and schedule the update.

Fixed-price white-glove posture

Sell the customer a complete, clearly defined outcome—not a debate about hourly rates. Internally, still model the crew hours, truck capacity, materials, route, access, specialty handling, uncertainty reserve, and target margin that make the fixed price responsible.

A confident white-glove price should account for:

- the verified inventory and expected capacity;
- crew size and internal production time;
- trucks, travel, stops, tolls, parking, and disposal;
- packing materials and protection;
- stairs, elevators, carries, narrow access, and booking windows;
- disassembly, reassembly, specialty items, and placement;
- a reasonable reserve for normal variation within the confirmed scope;
- the required service and margin check.

Say:

"We price the complete move you described, including the normal work required to deliver it properly. We still plan the labour, trucks, materials, and access behind the scenes, but you receive one clear price for the confirmed scope."

Ordinary variation versus material change

Absorb ordinary variation that remains inside the confirmed scope and capacity band: a few additional standard boxes, routine disassembly, or small differences in how a room was described. Revise the estimate when the job materially changes—for example, an added room, storage container, major specialty item, extra stop, difficult access, packing service, substantially greater volume, or a different route.

When a customer sells or removes items, update the inventory and recalculate the operational plan. Reduce the price when the change genuinely lowers the crew, truck, material, route, specialty, or risk requirement. If the work remains in the same cost and capacity band, explain why the package price does not change rather than inventing a line-item refund.

Say:

"Let us know what changes and we will update the scope fairly. If it changes the resources required for your move, we will revise the price; if the same crew, truck, and service plan are still required, the package may remain unchanged."

6. Estimate paths and edge cases

Situation	CRM setup	Pricing posture	Required confirmation
Standard house-to-house move	Standard quote, one move leg	Binding-style only when route, inventory, and material access are confirmed	Inventory, addresses, date, access exceptions
Apartment or condo	Standard quote plus unit/access data	Include meaningful elevator, carry, booking-window risks	Unit, elevator reservation, loading area
Labour-only loading/unloading	Labour-only quote	Hourly/minimum or scoped job price	Work location, container/truck size, crew, stairs, customer equipment
Customer-supplied storage container	Container service line	Scoped job price or labour-only package; truck excluded unless added	Container size/fill, load/unload/both, contents, access, placement
Move into storage	Storage leg	Price pickup, loading, travel, storage handling	Facility address, unit/access, duration
Storage then later delivery	Storage plus storage-delivery legs	Treat as separate operational days inside one journey	Delivery date/route may remain pending
Unknown new home	Move-out plus flexible hold	Use a stated storage allowance; later delivery provisional	Decision/check-in date
Multi-stop	One quote with multiple legs	Price each operational leg	Stop order, inventory share, route
Two pickups to one destination	Conjoint move	Do not duplicate the combined unload	Inventory ownership for each pickup

Situation	CRM setup	Pricing posture	Required confirmation
Split delivery to two destinations	Multiple delivery legs	Price route and unloading for each destination	Which items go where
Packing only	Packing-only quote	One customer package; retain internal labour/material assumptions	Rooms, contents, box estimate, pack date
Partial packing	Add packing labour/materials	Price selected rooms or remaining work	What customer packs versus Saturn Star
Move-out cleaning	Cleaning service line	Use confirmed scope/area or supplier price	Square footage, condition, empty/occupied
Junk removal	Junk leg/service	Include handling and disposal	Photos/volume, weight, prohibited waste
Specialty item	Specialty service line	Price equipment, skill, risk, or subcontractor	Dimensions, weight, stairs, path
Long-distance	Long-distance quote	Include outbound operational costs and return strategy	Route, driver plan, overnight/tolls, timing
Commercial	Commercial controls and direct costs	Add protection, admin, liability, after-hours, dock, COI	Site contact, access window, billing/PO
Small single-item move	Standard or labour-only as appropriate	Respect minimums; keep scope concise	Exact item, dimensions, access, route
No inventory available	Ballpark or hourly lane	Clearly provisional; offer photo/video	Evidence path and review date

7. Service-specific guidance

Packing

Determine:

- self-pack, selected-room help, or full pack;
- estimated boxes;
- fragile and high-value contents;
- materials delivery;
- packing day versus move day;
- unopened-material return or actual-usage policy.

Externally, packing may be presented as one complete package. Internally, retain separate labour, material-usage, delivery, and reserve assumptions so the package remains measurable and profitable.

If the offer says **all boxes included**, define it as all standard moving boxes and ordinary packing materials reasonably required for the verified household scope. It does not automatically include specialty art or TV crates, hazardous or commercial contents, extraordinary dense volume, unused take-home materials, or new scope added after confirmation. Build a material reserve into the package and track actual usage.

Customer-supplied containers and storage boxes

Do not price a 20-foot container from its length alone. Confirm:

- container length and estimated fill level;
- loading, unloading, transportation, or a combination;
- a contents description, photos, video walkthrough, or manifest;
- ordinary household goods versus dense books, tools, gym equipment, safes, or specialty items;
- loose contents versus boxed or wrapped contents;
- door position, parking, carry distance, stairs, elevator, and weather exposure;
- destination placement, assembly, debris removal, and extra stops;
- whether Saturn Star supplies a truck or only the crew and equipment.

If the container cannot be opened before quoting, use a documented scope band with an uncertainty reserve and clearly state the assumptions. A binding-style price requires enough evidence to confirm that the contents and access remain inside that band.

Say:

"We do not need to catalogue every small item, but we do need enough visibility to confirm the container's fill, density, specialty pieces, access, and placement. That lets us give you one responsible job price instead of surprising you later."

Cleaning

Confirm:

- move-out, move-in, or both;
- property square footage;
- empty versus occupied condition;
- ordinary versus deep clean;
- appliances, windows, carpet, or special requests;
- internal crew versus partner/vendor responsibility.

Never leave a requested cleaning line at zero without marking it included or pending price.

Junk removal

Confirm:

- photos or video;
- pickup address;
- approximate volume and weight;
- disposal fees;
- hazardous or prohibited items;
- whether it is part of move day or a separate visit.

Storage

Confirm:

- customer facility, partner facility, container, or company-arranged storage;
- move-in date;
- estimated duration;
- access rules and unit;
- monthly allowance;
- later delivery responsibility;
- insurance/protection while stored;
- what happens if duration changes.

Protection and valuation

Do not call an optional protection product “insurance” unless the actual policy and legal wording support that term. Explain standard and enhanced protection accurately. Escalate unclear claims.

Specialty handling

Flag pianos, safes, pool tables, hot tubs, gym equipment, antiques, oversized art, fragile glass, mounted televisions, and other unusual items.

Current service policy:

- **Pianos and hot tubs:** excluded from the ordinary Saturn Star moving scope. Offer a clearly identified qualified-partner referral when available; do not imply Saturn Star’s normal crew will perform the work.
- **Safes, pool tables, heavy gym equipment, oversized art, fragile glass, antiques, and mounted items:** manager-approved specialty service or qualified-partner referral only after dimensions, weight, path, equipment, and responsibility are confirmed.
- **Unsafe, prohibited, or unsupported work:** decline clearly.

Do not use “manager review” as language that suggests an excluded item is likely to be approved.

8. Crew, truck, and timing decisions

The CRM uses inventory volume, weight, access, route, hours, and move legs to recommend:

- crew size;
- truck count;
- single-truck sequence;
- shuttle;
- parallel trucks;
- split-day or staged plan.

The recommendation is not permission to ignore obvious contradictions.

Escalate when:

- cubic feet are zero or materially incomplete;
- combined volume is near or above truck capacity;
- route data is missing;
- the day exceeds a safe operating window;
- key possession conflicts with arrival;
- elevator or building time windows conflict;
- a second trip is likely;
- a later storage delivery is unknown;
- specialty work changes crew capability.

9. Pricing and margin protection

What can affect price

Use operational evidence:

- labour and crew requirements;
- truck and route cost;
- storage;
- materials;
- disposal;
- specialty equipment;
- direct commercial cost;
- capacity and short notice;
- uncertainty and complexity;
- transparent authorized discounts.

Do not use inferred wealth, protected traits, emotional vulnerability, or opaque “willingness to pay.”

Service and margin check

Before sending:

- every requested service has a price or is explicitly labeled included/complimentary;
- storage and junk legs appear in the service breakdown;
- specialty handling is visible;
- the route is ready or clearly provisional;

- direct-cost allocation is plausible;
- gross margin is not below the protection floor without approval;
- the customer-facing quote matches the actual plan.

Upward estimate revisions are allowed when scope or evidence supports them. Record the reason. Downward changes that threaten margin require approval.

10. Sending the estimate

The estimate is a customer-facing product, not merely a link. It must answer immediately:

1. What is Saturn Star recommending?
2. Why is this the right plan?
3. What exactly is included?
4. What remains optional, pending, or provisional?
5. What happens next?

Present information in this order:

1. **Our recommendation** and its reason;
2. the visual transition map;
3. confirmed inclusions;
4. optional services;
5. pending decisions and written assumptions;
6. the fixed price, deposit, and payment structure;
7. acceptance and the next customer/Saturn Star actions.

Offer a short review call for a complex estimate. When revising, identify what changed, why it changed, the price effect, and what did not change. Never make the customer compare two documents line by line to discover the revision.

Before sending:

- verify the customer name and contact;
- verify date and route;
- review inventory evidence;
- review services and assumptions;
- review crew/truck recommendation;
- read the customer-facing explanation;
- confirm deposit and billing model;
- check that no internal cost or private note appears publicly.

Suggested message:

"Hi [Name], I've put your move plan together based on what we confirmed. It separates the core move from any optional or pending services, so you can see exactly what is included. You can review it here: [short link]"

Use one short introduction, a blank line, and the link. Avoid dense paragraphs.

After delivery, verify the send status. If the estimate is opened, follow up using the customer's actual decision context rather than a generic "just following up."

11. Tentative reservations

Use when the customer:

- needs to speak with a partner;
- is comparing estimates;
- has not sold the home;
- is waiting for closing;
- does not know the final date;
- needs time to review.

Required fields

- reason;
- decision/check-in date;
- move date if known;
- notes describing what remains unresolved;
- SMS choice.

The standard message explains:

- the date or upcoming move is noted;
- this is a courtesy hold;
- it is not a confirmed booking or deposit;
- Saturn Star will check in by the decision date;
- changes can be incorporated.

Expiry behavior

Mission Control reconciles holds:

- booked work becomes converted;

- lost work becomes released;
- expired holds move to nurture and require human review.

The system does not automatically promise availability or message the customer when a hold expires.

11A. Uncertain does not mean unquotable

The representative's job is to separate what is known now from what must be finalized later. Do not tell a customer to return only after every detail is settled.

The three estimate modes

Mode	Use when	What the customer receives
Firm estimate	Date, route, inventory, selected services, and material access risks are confirmed	A complete price subject only to the written scope and normal change process
Locked-scope estimate	The core inventory and white-glove services are known, but the exact date, destination property, closing gap, or storage duration is not	A price for the known work, clearly identified allowances, and a promise to adjust only the affected variable pieces
Planning estimate	The customer is early and the available facts are not enough to lock the commercial scope	A useful range or planning model, the assumptions behind it, and one agreed next milestone

Never use uncertainty as an excuse to provide no help. Never disguise a planning estimate as a firm price.

Customer: "I do not have a date yet"

Capture the best useful timing window, not only a blank date:

- "first week of August";
- "mid-September after closing";
- "within two weeks of the sale";
- "flexible weekday move."

Then:

1. mark the exact date as flexible;
2. record the timing window and reason;
3. build the estimate from the known inventory and services;
4. state that crew availability and date-sensitive costs are reconfirmed when the date is selected;
5. agree on a check-in date or event;
6. create a tentative reservation when a courtesy hold is appropriate.

Suggested language:

"You do not need the exact day before we help. I can price the move around the first week of August based on the scope we know, then we will tighten the date and availability with you when that piece is confirmed."

Customer: "I know the city, but I have not picked the home"

The destination city is enough to begin route planning. Capture whether they expect:

- a detached house or townhouse;
- an apartment or condo;
- storage first;
- an unknown property type.

Price the known move and model travel to the destination market. Keep final mileage, unit access, elevator, parking, and long-carry exposure provisional until the address is known. Create a milestone to confirm the destination property; do not repeatedly ask for an address they do not have.

Customer: "My house has not sold"

Treat this as a guided sale-to-move journey:

1. verify the origin inventory while the listing evidence is available;
2. identify packing, move-out cleaning, junk, storage, and protection needs;
3. build a locked-scope estimate using a written timing assumption;
4. model a storage allowance if the possession gap is unknown;
5. offer a courtesy hold only when it can be represented honestly;
6. set a sale-status or closing-status check-in;
7. revise the date, storage duration, and destination leg without rebuilding the original scope.

Do not say the price is "locked" without stating which parts are locked. Inventory and selected services may be locked while fuel, distance, access, seasonal availability, tax, third-party storage, and changed scope remain adjustable.

Full moving consultation

Some customers need an expert, not merely a quote. Use the consultation path when the decision includes storage versus direct delivery, uncertain possession, staged moves, packing strategy, downsizing, junk removal, cleaning, specialty handling, or protection choices.

The consultation sequence is:

1. **Understand:** what is changing in the customer's life and what is still uncertain?
2. **Organize:** show the move as prepare, move out, hold, move in, and settle phases.
3. **Recommend:** explain the simplest viable plan and meaningful alternatives.
4. **Price:** distinguish included work, allowances, optional work, and pending variables.
5. **Commit:** choose booking, tentative reservation, or a dated decision milestone.

6. Stay with them: update the same plan as facts change.

Ask one useful question at a time. The customer should feel more organized after every interaction.

Required CRM follow-through

Every uncertain journey needs an owner and a named milestone:

Uncertainty	Required nudge
Approximate week or month	Confirm exact date at the agreed check-in
Waiting for sale	Review sale/closing progress
City known, home unknown	Confirm property type, then exact address/access
Unknown storage duration	Confirm release date and second move-in leg
Comparing or partner decision	Confirm decision on the agreed date

A vague note such as “follow up later” is not sufficient.

12. Follow-up and objections

“I need to think”

Do not immediately argue. Ask:

“Of course. What part are you weighing—the timing, the scope, or the price?”

Resolve what can be resolved. If they still need time, create a tentative reservation and agree on the decision date.

“I’m comparing quotes”

Ask what they need to compare fairly:

- services;
- inventory assumptions;
- binding versus hourly model;
- protection;
- truck/crew plan;
- add-on fees;
- storage or extra stops.

Do not attack competitors or invent their practices.

"It is too expensive"

First diagnose:

- Is the scope wrong?
- Is a service optional?
- Are they comparing a different inventory?
- Is the concern cash timing rather than total value?
- Is this customer simply seeking the lowest price?

Do not discount before understanding the objection. Record price as the loss reason only if price was truly decisive.

"I don't have a date"

Mark the date flexible, record why, create the appropriate storage/unknown-destination journey, and schedule a meaningful follow-up.

"I am not home"

Offer a later call, photo link, video survey, or clear follow-up time. Do not keep interrogating.

No response

Use the follow-up queue. Do not send duplicate quotes because the first send is uncertain. Check timeline status and quote delivery before resending.

Follow up from the last known context:

- **Viewed estimate:** ask what part needs clarification or whether a short review would help.
- **Waiting for sale, closing, possession, or a partner:** refer to that milestone specifically.
- **Date approaching:** confirm availability and the unresolved decision without manufacturing urgency.
- **Price concern:** compare scope and responsibility before discussing a reduction.
- **Overwhelmed customer:** offer one simple next step, not another questionnaire.
- **No engagement:** use a respectful cadence, then move to nurture rather than pursuing indefinitely.

Say:

"When we spoke, you were waiting to confirm the possession date. Has that piece become clearer, or would it help if we keep the plan flexible for now?"

13. Booking and payment

A booking should have:

- accepted commercial scope;

- move date or documented flexible-date rule;
- payment terms;
- deposit status;
- correct payment account for the responsible branch/brand;
- operations handoff.

Ottawa/Dexa payment routing must remain isolated from Saturn Star city configurations. Never select a payment account manually based only on the destination. Follow the configured branch/account resolution and escalate mismatches.

Payment records—not stale lead flags—control financial truth. If lead status and transactions disagree, treat it as reconciliation work.

Never resend payment links repeatedly without checking whether a payment session or payment already exists.

14. Operations handoff

The customer must never restart the story after booking. Sales owns a warm transfer; operations owns explicit acceptance.

Customer-facing choreography

1. Sales introduces the operations owner by name the same staffed day.
2. Sales transfers the accepted quote, transition map, evidence, priorities, promises, and unresolved decisions.
3. Operations acknowledges the customer's primary concern in its first contact.
4. Operations confirms the preparation timeline, next action, owner, and deadline.
5. Any question already answered is verified from the record rather than asked again.
6. If information conflicts, explain what is being reconciled; do not make the customer mediate between departments.

After booking, confirm:

Customer readiness

- move date;
- origin and destination;
- contact;
- access;
- parking or loading exception;
- customer promises.

Financial readiness

- accepted quote;
- deposit;
- payment terms;
- correct balance.

Crew readiness

- assigned crew;
- crew confirmation;
- specialist capability.

Equipment readiness

- truck count from the quote;
- truck reservation;
- tools and protection;
- specialty equipment.

Operational readiness

- job packet;
- route and stop order;
- customer constraints;
- key/elevator windows;
- storage details;
- services by phase.

Ownership must never be ambiguous. Sales remains responsible until operations explicitly accepts the handoff.

15. Move-day changes

If the customer changes scope onsite:

1. record the requested change;
2. identify added work, time, or cost;
3. preserve the original quote;
4. create a revision or onsite change entry;
5. obtain approval where required;
6. notify the customer;
7. record how approval was given;

8. update crew instructions.

Never erase the original commercial history.

Examples:

- extra room or storage locker;
- unlisted boxes;
- second stop;
- junk removal added;
- packing requested;
- long carry or inaccessible elevator;
- item staying behind;
- destination changed.

16. Completion, payment, and customer care

The **Settle** phase is part of the service. Before the team leaves:

- confirm priority furniture and large items are placed correctly;
- ask whether any immediate room, item, or instruction was missed;
- explain remaining unpacking, debris/material pickup, storage, or later-delivery work;
- identify any issue and its named owner;
- confirm that the customer knows what happens next.

After the move:

1. record actual start/end and hours;
2. record actual crew;
3. record issues or damage;
4. reconcile estimated versus actual;
5. collect or invoice the balance;
6. confirm payment records;
7. request a review only after appropriate care;
8. record referral generated;
9. identify realtor, property manager, storage, employer, or other legitimate partnership context when naturally provided.

Do not turn customer care into aggressive data extraction.

Send a calm completion summary showing completed work, remaining action if any, payment status, issue owner, and care contact. Check for unresolved concerns before asking for a review.

16A. Saturn Star service recovery

When Saturn Star is late, wrong, unclear, duplicated, unavailable, or has created extra work for the customer:

- 1. Acknowledge:** state what happened and its effect without defensiveness.
- 2. Own:** Saturn Star owns the customer outcome, including failures by a crew, partner, or system.
- 3. Explain:** provide only useful facts, not internal excuses.
- 4. Resolve:** name the action, owner, and deadline.
- 5. Confirm:** contact the customer after the action to verify completion.
- 6. Learn:** record the root cause and correct the process, data, or control.

Say:

"You should not have had to repeat that, and we own the extra work it created. I am correcting the move plan now. I am your owner for this, and I will update you by 3:00 p.m. today."

Never blame a subcontractor, another department, automation, or "the system." Escalate damage, safety, payment, legal, or trust concerns immediately, but remain the customer's visible owner until a named person accepts responsibility.

17. Lost, declined, and nurture outcomes

Use the most accurate reason:

- price;
- timing;
- availability;
- competitor;
- service scope;
- communication/customer experience;
- trust/confidence;
- no response;
- not a fit;
- cancelled move;
- DIY.

Add factual notes:

- what the customer said;
- whether another company was selected;

- what mattered;
- what Saturn Star could reasonably improve;
- whether the lead should remain nurture.

Do not write insults or speculation. “Price haggler” is not useful data. “Customer required a \$900 total for a scope priced at \$1,650; declined after service comparison” is useful.

18. Calls and communications

Calls

The dialer supports shared-number workflows, conference handling, transfer, hold, routing, and recording controls. If a call drops:

- check dialer health and timeline;
- check whether another session used the same identity;
- do not repeatedly dial without understanding call state;
- record the failure context.

Spam

Block confirmed spam callers from the blocked-callers control and preserve the name/reason. Do not block an uncertain caller solely because they called twice.

SMS and email

- use the correct branch identity;
- keep messages brief and breathable;
- personalize with the customer’s name;
- use short customer links;
- verify delivery before resending;
- do not send multiple estimates because the UI response was slow;
- pause automation when a human takes over or the customer requests it.

19. Data quality rules

Record

- source and attribution;
- customer-stated priorities;
- evidence type;
- services requested;

- unresolved assumptions;
- quote revisions;
- tentative reason and outcome;
- loss reason;
- actual job outcomes.

Do not record or infer for pricing

- race, ethnicity, religion, health, disability, or other protected traits;
- emotional vulnerability;
- speculative wealth;
- depression or mental-health assumptions;
- unrelated employment details;
- private information with no service purpose.

Experimentation

Controlled experiments should:

- have a named hypothesis;
- use stable assignment;
- compare a customer-experience or operational change;
- record exposure;
- define the outcome before launch;
- protect service and pricing floors;
- stop if customer harm appears.

Do not experiment by secretly giving equivalent customers arbitrary exploitative prices.

20. Daily CRM rhythm

Start of shift

1. Check notifications and dialer health.
2. Review Inbox.
3. Review customer-waiting items.
4. Review today and overdue follow-ups.
5. Review active tentative reservations.
6. Review quotes viewed but not decided.

During shift

1. Work fresh inbound first.
2. Update the lead while context is fresh.
3. Choose one primary evidence path; add corroborating evidence where a readiness gate reveals a gap.
4. End with a next step.
5. Verify messages and quote sends before retrying.

End of shift

1. No fresh inbound left unanswered.
2. Every active lead has an owner.
3. Every promise has a date.
4. Every tentative hold has a decision date.
5. Every quote has a delivery/status check.
6. Escalations contain enough context for the next person.

21. Escalation rules

Escalate to a manager when:

- price override threatens margin;
- unusual commercial terms are requested;
- scope exceeds ordinary crew/equipment capability;
- the customer disputes payment or damage;
- access or timing makes the plan unsafe;
- branch or Stripe account appears wrong;
- multiple accepted quotes appear for the same job;
- customer media counts do not reconcile;
- AI and customer confirmation conflict materially;
- a legal, insurance, privacy, or safety question arises;
- the system state is inconsistent.

When escalating, include:

- lead and quote;
- exact issue;
- evidence;
- customer expectation;
- deadline;

- recommended next action.

22. Frequently asked questions

Should I give a price as soon as the form arrives?

No. A form starts the conversation. Verify enough context to make the estimate defensible. Use a ballpark only when the customer understands what remains unknown.

Can I use the stored listing scan without telling the customer?

Use it as internal evidence and explain naturally if you present its results. Do not imply the customer uploaded it. Ask the customer to confirm the current inventory.

What if the listing is old?

Treat it as a starting point. Request customer confirmation, photos, or video.

What if MLS scanning takes two minutes?

Continue the conversation calmly. Do not fill the delay with ten questions. Explain that the property review is working in the background.

What if an item has zero cubic feet or weight?

Do not finalize. Resolve it through the item catalog, a reasonable measured estimate, photo/video review, or manager confirmation.

When should I use photos versus video?

Photos are best for ordinary rooms and asynchronous convenience. Video is best for complex scope, hidden areas, wardrobes, garages, commercial work, and spoken context.

Can the customer change the inventory after receiving a quote?

Yes. Record the change, preserve the original quote, recalculate, and send a revision with the reason.

Can the customer change after paying a deposit?

Yes, subject to the commercial terms. Record the scope change and revised price or schedule. Do not overwrite payment history.

When is a quote binding?

Only when the required route, inventory, services, access, and assumptions are sufficiently confirmed and the quote terms support it. Provisional information should remain visibly provisional.

What is the difference between a tentative reservation and a booking?

A tentative reservation is a courtesy hold with no confirmed deposit commitment. A booking is commercially confirmed and enters operations.

What happens when a tentative hold expires?

It moves to nurture for human review. The customer is not automatically messaged and the date must not be promised again without checking.

What if the customer has not sold the house?

Record a flexible date, create the appropriate tentative reservation, provide a defensible planning estimate, and schedule a decision point.

What if the customer needs storage but does not know for how long?

Model a visible allowance, such as two months, explain that actual duration adjusts, and keep the later delivery date/route pending.

What if they want only large furniture moved?

Mark smaller or staying items excluded, confirm the exact large-item inventory, and quote that scope.

What if there are two pickups?

Use conjoint when two origins combine into one destination. Use normal multiple legs when the operational journey differs.

What if they need two moves on different days?

Use a staged/storage journey or linked job structure as appropriate. Do not disguise two operational days as one.

What if the customer supplies the truck or container?

Use labour-only/container handling. Do not include a Saturn Star truck unless separately requested and priced.

What if the customer compares a storage container with full service?

Explain the operational differences: self-loading responsibility, container transport/storage fees, double handling, timing, protection, and effort. Use real known figures or label estimates as assumptions.

What if the customer wants cleaning or junk removal?

Add a separate service line with confirmed scope and price. Do not bury it in notes.

What if we cannot perform a specialty service?

Escalate for a qualified subcontractor or exclude it clearly. Never imply ordinary movers will safely handle specialist work.

Why does the service check say “blocked”?

The system found an unpriced service, incomplete route, provisional scope, missing specialty line, or unsafe margin. Resolve the listed protection before sending.

Can I override the estimate upward?

Yes when evidence or scope supports it. Record the reason. The customer should see an explainable revision.

Why is a lower price asking for approval?

The projected margin may fall below policy. A manager must review the commercial risk.

Which Stripe account receives payment?

The configured responsible branch/brand determines the account. Ottawa/Dexa is isolated. Do not guess based on where the customer is moving to.

What if a payment or quote send seems stuck?

Check the timeline, quote status, and payment records before retrying. Repeated clicks can create duplicates.

What if the call or video disconnects?

Use the reconnect path. If it cannot recover, end the session cleanly, preserve what was captured, and create a new scheduled next step rather than creating several sessions blindly.

Can I block a spam caller?

Yes when spam is confirmed. Record a useful label and reason so the block list remains auditable.

What if the customer says no?

Ask respectfully whether the deciding factor was price, timing, availability, competitor, service scope, experience, trust, DIY, cancellation, or fit. Record the answer and stop pushing.

What if they do not answer?

Use the follow-up cadence and nurture stage. Do not label “price” without evidence.

What should never happen?

- sending a quote before understanding the move;
- hiding uncertainty;
- asking fifteen questions in one message;
- using the wrong city or payment brand;
- sending duplicate quotes or payment links;
- treating AI output as confirmed customer scope;
- silently changing an accepted quote;

- promising availability after a hold expired;
- letting a customer promise disappear without a follow-up.

23. Manager quality audit

Review a sample of leads weekly:

- Was the correct lead matched?
- Was the address correct and Canadian?
- Did the conversation feel calm and guided?
- Was the evidence source accurate?
- Were unknowns visible?
- Did the quote match the move plan?
- Were add-ons customer-led or contextually recommended?
- Was margin protected?
- Was the next step explicit?
- Did tentative reservations convert or expire correctly?
- Were losses categorized honestly?
- Did actual hours and costs feed back into learning?

The purpose is not to punish reps. It is to improve the system, training, and operational accuracy.

24. Document control

Mission Control is the operational source of truth. This playbook explains the approved workflow; it does not override permissions, payment controls, safety rules, customer contracts, or the behavior of the live system.

When the software and this playbook differ:

- 1.** do not invent a workaround or make an unsupported customer promise;
- 2.** use the safest workflow the live system supports;
- 3.** escalate any financial, safety, privacy, identity, or customer-commitment conflict;
- 4.** report the mismatch to the document owner;
- 5.** update the playbook after the operating change is reviewed and approved.

Review this document after a material CRM release and at least quarterly. Each controlled revision should update the version, effective date, affected workflow, and training note.
